

Multi-Utility Tactical Transport (MUTT)

General Dynamics Land Systems is proud to have been selected by the U.S. Army in July 2020 for the Small Multipurpose Equipment Transport (S-MET) program. The program will use our Multi-Utility Tactical Transport (MUTT) to reduce physical burden on the dismounted Soldier. MUTT is a semi-autonomous robotic platform that delivers tremendous capabilities. It is the most intuitive, capable and reliable UGV ever produced and the first of its kind to be selected for service alongside dismounted troops.

Land Systems is working with the Army to deliver MUTTs in the initial S-MET configuration and also to equip them with a wide array of Modular Mission Payloads (MMPs) in the future.

- The MUTT uses unique methods of control, such as the Dismount Following Tether (DFT) or the easy-to-use One-Handed RC Controller, which minimize Soldiers' physical and cognitive load while performing their dismounted mission.
- Future MMPs will provide capabilities previously unavailable to dismounted Soldiers, including autonomous resupply, C-UAS, CBRN, ISR, EW, direct fire and indirect fire.
